Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1846 Excerpt: .line. If the extremity x_0, y_0, z_0 , is subject to a condition, that it must be upon a given surface; the normal to that surface at the extremity of the line may be taken for the axis of x_0 , which gives $4o = 0$, (772) and leaves y_0 and z_0 arbitrary; whence, by (765), $=0, 5.=.$, (7,3, that is, the cosine of the angle which the required line makes with the surface in each direction is zero; or, in other words, the required line is perpendicular to the surface. If the extremity x_0, y_0, z_0 , is subject to two conditions, that is, if it is at the intersection of two given surfaces; let this line be the axis of z_0 , and we have $x_0 = 0, y = 0$, (774) Shortest line between two surfaces or two lines. whence (765) gives. or the required line is perpendicular to the given line. Hence The shortest line which can be drawn between two given surfaces, or two given lines, or a line and a surface, or a point and a surfacet or a point and a line, is the straight line which is perpendicular to the surface or line at the corresponding extremity. 129. Corollary. If the shortest line is required to be drawn upon a surface of revolution, let the axis of z be the axis of revolution, let u be the projection of the radius vector upon the plane of $x y$, and let r be...
